SENIOR SOFTWARE ENGINEER

VUE • ANGULAR • MIGRATIONS • PERFORMANCE

Full-stack developer, 15+ years in, with the kind of attention to detail that notices when something is a pixel off and can't quite leave it there. Vue, Angular, TypeScript, Node. The usual senior-frontend toolkit, with enough backend depth to hold up my end of a conversation. I like migrations, because that's where you get to make something genuinely better. I like accessibility, because it's obviously the right thing to do and weirdly easy to half-ass. I like the moment a 25-minute build becomes a 1-minute build, and everyone gets their afternoon back.

CORE COMPETENCIES

- Responsive Web Applications
- Efficiency Optimization
- Coaching & Mentoring
- UI/UX Planning & Design
- Complex Problem-solving
- Agile Methodologies

EXPERIENCE

TriNet • Remote

2021 – 2025

A provider of full-service HR solutions.

SENIOR SOFTWARE ENGINEER

Led the in-house redesign of TriNet's corporate website with measurable improvements to performance, accessibility, and scalability. Picked the stack and shaped the architecture around how marketing and content actually worked. Managed one direct report.

- Owned planning and delivery for the migration end-to-end, with sprint-based scope adjustments as priorities shifted.
- Architected and executed a full codebase migration from Vue2/Nuxt to Vue3/Astro on a Node.js backend and Contentstack headless CMS.
- Rebuilt and automated the codebase and test suite, enabling rapid feature delivery while elevating accessibility grades from D to A (WCAG standards).
- Recruited and managed external contractors to accelerate project timelines and ensure on-time delivery of key milestones.
- Built self-serve content workflows for three departments. Routine updates no longer needed an engineer in the loop.
- Designed the front-end architecture and stack with maintainability and cross-device behavior treated as core requirements, not afterthoughts.
- Lifted visitor conversion by 25%+ through a redesigned, user-friendly interface with improved visual hierarchy and navigation.
- Slashed image loading times by 75% by implementing compression pipelines and next-generation image formats.
- Cut Netlify build times from 25 minutes to 1 minute through incremental fetches, cache reuse, and killing expensive no-op asset processing. Marketing and content teams got real-time iteration instead of quarter-hour waits.

"Sean was an essential part of our team during the homepage updates integrated with Content stack. Despite constant scope changes and last-minute updates, he stayed focused, adaptable, and hardworking. Sean consistently went the extra mile, putting in additional hours during critical project migration phases. His technical skills and dedication were invaluable in a fast-paced marketing environment."

– Natalia D., QA Tester JavaScript and Front-end applications

Independent Consultant • Remote

2018 – 2021

A private consultancy providing website design, software development, and engineering services.

SENIOR SOFTWARE ENGINEER

Delivered end-to-end web design, full-stack development, and DevOps engineering for a portfolio of up to 10 clients, including Ann Taylor. Owned every phase from proposal through deployment, consistently shipping on time and within budget.

- Took each engagement from design through deployment. Scalability, performance, and security treated as defaults, not retrofits.
- Served as sole technical decision-maker across engagements: selecting stacks, setting architecture, and owning the full lifecycle from proposal to production deploy.
- Developed detailed technical proposals and consistently delivered projects on time and within budget.

North American Power • Norwalk, CT

2017

A complex network providing electricity to homes, businesses and industries across the continent.

DRUPAL WEB DEVELOPER

Redesigned and rebuilt the enrollment portion of the company's website as part of the three-person EWR (Enrollment Website Redesign) team, on a fixed one-year engagement.

- Built the redesign on Drupal 7, Foundation 6, and PHP, authoring SCSS and custom JavaScript to support the new enrollment flow.
- Rebuilt the enrollment flow for fully remote sign-up, removing the manual handoffs between marketing traffic and account creation.
- Paired with design and business stakeholders through weekly scrums, keeping enrollment-flow changes aligned across a compressed delivery schedule.

DiscoverOrg • Vancouver, WA

2014 – 2016

A business contact database and B2B sales lead provider.

SENIOR SOFTWARE ENGINEER

Led the redesign and modernization of the company's website. Transitioned the platform to Angular, Node.js, and Java-based systems while keeping the live site running through repeated requirement changes.

- Contributed to the company's growth trajectory from \$30M to \$1.2B in annual revenue by building a scalable, modern web platform.
- Improved system responsiveness by 50% through targeted UI/UX optimizations. Kept new product features shipping in parallel without regressions.

EARLY CAREER

Blue World, Front-End Developer • Direct Wines, Front-End Developer

EDUCATION & CERTIFICATIONS

Quinnipiac University, Master of Science, Interactive Media and Communications
Albertus Magnus College, Bachelor of Science, Management Information Systems
