SENIOR SOFTWARE ENGINEER

VUE • ANGULAR • MIGRATIONS • PERFORMANCE

Full-stack developer, 15+ years in, with the kind of attention to detail that notices when something is a pixel off and can't quite leave it there. I work in Vue, Angular, TypeScript, and Node, and I build my own iPhone and Mac apps in Swift and SwiftUI. I like migrations, because that's where you get to make something better. I like accessibility, because it's obviously the right thing to do and weirdly easy to half-ass.

CORE COMPETENCIES

- Responsive Web Applications
- UI/UX Planning & Design
- Efficiency Optimization
- Complex Problem-solving
- Coaching & Mentoring
- Agile Methodologies

EXPERIENCE

Univar Solutions • Remote — 2026 – Present

A chemical distributor. On contract through Insight Global.

LEAD DEVELOPER

Lead development of two iPhone and iPad apps that run on Capacitor, with Firebase between them and SAP.

- Rewrote the drivers' proof of delivery app, which was still on Angular 17, in Vue and Nuxt 4 in the first three weeks, so both apps are on one stack.
- Built screens that let warehouse staff scan the batch numbers on returnable containers (cylinders, drums, and totes) in the inventory app and send them to SAP, instead of recording them in a separate asset-tracking app.
- Tracked down why retries after an SAP error never left the iPad. The app answered them from its cache.
- Wrote the team's deploy and hotfix steps and cleared the dependency findings from the security scanner.
- In September, started the same Angular-to-Nuxt rewrite for a third app, the plant dashboard.

TriNet • Remote — 2021 – 2025

A provider of full-service HR solutions.

SENIOR SOFTWARE ENGINEER

Led the in-house redesign of TriNet's corporate website. Picked the stack and shaped the architecture around how marketing and content worked.

- Planned and led a full codebase migration from Vue 2/Nuxt to Vue 3/Astro on a Node.js backend and Contentstack headless CMS.
- Rebuilt and automated the codebase and test suite, and took the site's accessibility grade from a D to an A (WCAG standards).
- Managed one direct report, and hired and managed outside contractors for the big pushes.
- Set up Contentstack so three departments could publish their own updates without a developer.
- Cut Netlify build times from 25 minutes to 1 minute through incremental fetches, cache reuse, and killing expensive no-op asset processing.
- Redesigned the layout and navigation, and visitor conversion went up 25%+.

> "Sean was an essential part of our team during the homepage updates integrated with Content stack. Despite constant scope changes and last-minute updates, he stayed focused, adaptable, and hardworking. Sean consistently went the extra mile, putting in additional hours during critical project migration phases. His technical skills and dedication were invaluable in a fast-paced marketing environment."
> – Natalia D., QA Tester JavaScript and Front-end applications

...Continued...

- Cut image load times 75% with better compression and newer formats.

Independent Consultant • Remote 2018 – 2021
A private consultancy providing website design, software development, and engineering services.

SENIOR SOFTWARE ENGINEER

Delivered web design, full-stack development, and DevOps for up to 10 clients at a time, including Ann Taylor. Owned every phase from proposal through deployment, and everything shipped on time and on budget.

North American Power • Norwalk, CT 2017
An electricity provider.

SENIOR WEB DEVELOPER

Redesigned and rebuilt the enrollment portion of the company's website as part of the three-person EWR (Enrollment Website Redesign) team, on a fixed one-year engagement.

- Built the redesign on Drupal 8, Foundation 6, and PHP, authoring the SCSS and custom JavaScript.
- Rebuilt the enrollment flow for fully remote sign-up, removing the manual handoffs between marketing traffic and account creation.

DiscoverOrg (now ZoomInfo) • Vancouver, WA 2014 – 2016
A business contact database and B2B sales lead provider.

SENIOR SOFTWARE ENGINEER

Led the redesign and modernization of the company's website. Transitioned the platform to Angular, Node.js, and Java-based systems while keeping the live site running through repeated requirement changes.

- Contributed to the company's growth from $30M to $1.2B in annual revenue by building a scalable web platform.
- Improved system responsiveness by over 70% through targeted UI/UX optimizations. Kept new product features shipping in parallel without regressions.

EARLY CAREER

Blue World, Front-End Developer • Direct Wines, Front-End Developer

APPS

All five are at seanmandable.me/apps/.

- **Debt Descent** is a debt-payoff planner for iPhone, iPad, and Mac (App Store).
- **ModernPAR** is a free replacement for MacPAR deLuxe that verifies and repairs PAR files on the Mac (GitHub).
- **Brown Sign** reads the brown highway signs you pass and tells you what the landmark is (iPhone, App Store).
- **ReKey** finds reused and compromised passwords across the browsers you've used (Mac App Store and GitHub).
- **Saddle** mounts and unmounts external drives from the Mac menu bar (GitHub and Homebrew).

EDUCATION & CERTIFICATIONS

Quinnipiac University, Master of Science, Interactive Media and Communications
Albertus Magnus College, Bachelor of Science, Management Information Systems

TOOLS & TECHNOLOGIES

Vue, Nuxt, Astro, TypeScript, JavaScript, Node, React, Angular, Capacitor, Firebase, Swift, SwiftUI, SwiftData, PHP, Tailwind, HTML, CSS, SCSS, Drupal, Contentstack, WordPress, Vite, Express, MySQL, AWS, Apache, Linux, Git
